# Rahul: your manual tasks

Continuum, Team Binary Builders. These need real people or real clicking, so Claude cannot do them. Everything else is in RAHUL_WORK.md for your Claude.

**Golden rule:** write only what really happened. No invented people, quotes or numbers. If you did not run something yet, write "not yet run". Judges can check.

## Task 1: User interviews (at least 5)

**Who:** club leads, mentors, or people who have handed a project over before. Students from other clubs are fine.

**How long:** 10 to 15 minutes each, in person or on a call. Show the live site only at the end.

**Ask these (in your own words):**

- How does a handover happen in your team today?
- What was lost the last time someone left? How did you find out?
- Would you trust a handover written by software? What would you need to see first (sources, who approved it)?
- Would you approve claims one by one before the new person sees them? Is that too slow?
- What should never be shown to the new person?
- (After showing the site) What was confusing? What is missing?

**Tell each person:** we use only fake demo data; do not share anything confidential; ask if you may quote them (anonymously is fine).

**Write down** in **docs/user-research.md**: date, their role (not their name unless they agree), 2 or 3 real quotes, and one change we made because of it.

## Task 2: Handover test (with and without Continuum)

**Goal:** show whether Continuum really helps a newcomer. You need **two different people** who do not know CampusKart.

- **Person A (without Continuum)** gets only the GitHub repo (github.com/PawanBhandari03/campuskart) and the chat export (demo-data/chat-export). Start a timer.
- **Person B (with Continuum)** gets only the live site, logged in as Successor. Start a timer.
- Both answer the same 6 questions: Why did payments move to UPI? Who holds the image bucket credential? Where is the app deployed, and is that clear? What is the status of PR #94? Who owns the college SMTP account? What is risky about the login fix?
- Stop the timer when they finish. Check each answer against **demo-data/ANSWER_KEY.md**. Count right answers.

**Write down** in **docs/testing.md**: time and number correct for each person, and one honest note. Two people is a small sample. Say so. Do not call it proof.

## Task 3: Click through the live site like a judge

- Open the live link in an **incognito window** (no login, no help). Does it work? Is anything confusing?

- Do the full path: pick Reviewer, open CampusKart, open a source, handle a conflict, answer a gap, approve, publish, switch to Successor, acknowledge a section.
- Switch to Successor and confirm you cannot see anything marked lead only (for example the mentor note).
- Try it on a phone too. Does text fit? Can you tap everything?
- Wait 15 minutes, then open the site again. The first load may take about a minute (free hosting wakes up). Check the waiting message looks fine.
- Write every problem you find in a list with a screenshot and send it to Pawan. Do not fix API problems yourself; report them.

## Task 4: Fill in the placeholders

- **docs/user-research.md** and **docs/testing.md** must contain real results before the deadline (see above).
- Check that README.md lists every tool, library and service we used (AI tools too).
- Read the project PDF your Claude produces. Is every sentence true? Remove anything we did not build.

## Deadlines (India time)

| | |
|---|---|
| Round 2 closes | Wed 11 Nov, 10:00. Pawan submits by about 04:00. |
| Interviews and handover test done | Tue 10 Nov, evening |
| Click-through problems sent to Pawan | Tue 10 Nov, noon (so there is time to fix) |
| Final check of all links in incognito | Tue 10 Nov, night |

Questions? Message Pawan. If you are stuck on a task, tell him early.
